An online game-guide app that posts any game's guide, maps, maps for cheat engine, etc. 9. A specific website like cheatengine

Forager LEVEL HACK Cheat Engine (FLLHCE) is a cheat engine script by Daz1120 that was released into the public domain some time in late 2011/early 2012. The script is widely used among many different clans and users on the Forager 1.8 emulator as well as the 1.8 testing servers, and can be used to cheat in any Forager 1.8 related servers, even those 1.8 testing servers that have a 1.0.0-1.2 version presence as well as other cheats such as no fall damage, noclip, etc. This script is also used as a quick fix for all other games such as other browsers, and other games. The FLLHCE is a cheat engine script people use to misbehave or cheat because it allows users to: teleport, change gravity, turn off their character's collisions (a popular cheat for falling and flying), and many other things. They use this cheat engine script because it can be used to change any players stats such as speed, health, stamina, etc. The script is rooted in cheat engine 2.1.0, and is widely used for cheating Forager 1.x (and 1.8), and has been known to be used by many clans such as KoTHa, Rapture Gaming, and The Darkside Boys, among others. This script was released to the public domain by hackers who made it for their own use, however we can see several variants of this script on online cheat engines such as:

This cheat engine script came out in 2011 and is currently tracked as 464393903 on the source forge page.
